RACECEIVER Elite 1600

Race Control to Driver

one way communication system

More Than Just a Race Scanner

The **RACEceiver Elite 1600** is a must for all clubs and drivers - it allows race officials to broadcast directly to all drivers increasing safety and efficiency - *all without having the drivers talking back!*

The system can provide notification of flag situations around the track, or specific instruction to any particular driver.

"Red flag at turn three - please slow down"

"Black flag for car 72 - dangerous driving"

The Elite 1600 is preprogrammed with 1,600 channels and will allow you to manually scan (1 or 100 at a time) to the channel that you want to monitor.

It utilizes the industry standard 3.5 mm jack, allowing the use of a headset.

Each **RACEceiver Elite 1600 Driver Kit** contains:

- One RACEceiver (Elite 1600) unit
- Holster
- Two AAA batteries
- Earpiece

Provide your team or track with the best in race scanners.

In addition to the **RACEceiver Elite 1600 Driver Kit** we can also provide:

- Basic Repeater Base Station
 - Antenna
 - Race Control Radio
 - Antenna Mast for Vehicle mounting - if required
- (please contact us for details and advice)

RACECEIVER Elite 1600

“The RACEceiver provides an excellent way of communicating with drivers and teams during events.”

**Ian Watson,
BARC Business Development Manager**

“You can never shy away from safety, RACEceiver lets you know about incidents long before you get to them. Not only does it keep the drivers safe it also keeps the marshal's safe and for me that is paramount. A great inclusion to the series.”

**John Jon Higgins,
Legends National Champion 2008**

“Even if it only saved one Marshal or Driver from injury it would be worth the money.

The early warning it can give can save someone's life. Fellow Clerks of the Course have all commented how good it is for safety and making drivers aware.

Its brilliant for keeping the race alive without compromising safety.”

**Steve Hill,
BARC Clerk of the Course**

“My son races in the Bandolero Bandits. We just bought a RACEceiver and I would like to say these are great. The race officials can talk to the drivers and this makes the racing safer. Thanks so much for a great product.”

Tim, Columbus, North Carolina

“The RACEceiver's ability to warn drivers of an incident or situation 'simultaneously' is one of the most significant motor racing safety developments since roll cages and seat belts were introduced.

The fact that all drivers can immediately be made aware not only of potential dangers but RACEceiver also offers numerous operational benefits such as the Clerk of the Course has direct contact from the time the cars are making their way to the Assembly area, then throughout the race and even on their way to Park Ferme, thus preventing the confusion often associated with drivers being unaware of the actual procedures of a particular race or venue.”

**Richard Peacock,
Circuit Operations Director**

“It is quite astonishing how the supply of good information and communication through the RACEceiver system has revolutionised both the safety of the on-track action, and the efficiency of the pre-race and post-race organisation.”

**Glenn Burtenshaw,
Legends World Semi-Pro Champion 2008**
